HIGH TECH, LIGHTWEIGHT VEHICLE ARMOR

Vehicle *Armoring* Solutions

INTERNATIONAL ARMORING CORPORATION ((IAC)) was founded on the basic principle of manufacturing the finest, most technologically advanced armored vehicles in the world and that are far superior in performance and appearance to the competition...

Combined Motor Holdings, a listed company on the JSE and International Armoring Corporation have joined forces with the establishment of Armormax SA, a company dedicated to the armoring of motor vehicles utilizing the latest in high tech lightweight opaque and transparent armor. IAC, based in Utah in the USA, is a world leader in the design and manufacture of both light armored and fully armored vehicles. With facilities around the world they count the Pope, world leaders, high profile celebrities and businessmen amongst their clients.

Utilizing the latest in lightweight armoring technology, Armormax is able to armor select makes of luxury vehicles currently available in SA to a B4 level. A B4 level of protection will enable the armored portion of the vehicle to withstand shots fired from a .44 Magnum at point blank range. (A .44 Magnum is one of the most powerful handgun calibers)

Given South Africa's high level of violent crime and hijacking, there is a clear need for greater security. The Armormax product brings a level of security previously only within reach of the super rich or political elite, to the owners of luxury vehicles so popular in our country. Analysis of hijackings in SA show that by far the majority of hijackings are committed with handguns, which in armoring terms are a relatively easy threat to negate.

Part of the uniqueness of the Armormax offering is the modular system employed. After our risk assessment a client may decide that only the front door and window need armoring. Another may need a full armoring solution with all doors and glass being armored. The lightweight armor fitted to the vehicle has little effect on the performance and handling of the vehicle. A vehicle armored by Armormax will look the same as the original, with only the discerning few aware of its full potential. The lightweight transparent armor (ballistic glass) fitted to the vehicle is optically indiscernible from the original OEM glass.

One of the many attractive features of the Armormax offering is its price. An Armored motor vehicle purchased from one of the motor manufacturers starts in the region of Two Million Rand. The Armormax offering is substantially more cost effective and your unique package will be discussed and tailored to suit your specific requirements. Armor can be installed as an aftermarket product or at the time the vehicle is purchased. The armoring can be financed as part of the purchase price of the vehicle.

For those with a higher security risk a B6 or B7 level of armoring is available.

Vehicle Armoring Solutions

IAC has years of experience in manufacturing and delivering high-level armored vehicles to every continent in the world and prides itself on designing and producing vehicles, which give protection to the perceived threat level, maintain the vehicles original appearance and perform as a normal passenger vehicle. IAC views its product as a service - realizing it is a very personal experience, and one of utmost importance.

At the Armormax facilities, we specialize in the assembly of bullet-resistant passenger vehicles for government officials, business executives, or any other individual who perceives a threat to their safety. Armormax offers a wide variety of armoring options to fit any need.

Transparent Armor

Referred to as Lightweight Transparent Armor or LTA[®]. LTA[®] glass provides a superior level of protection against the toughest security concerns, from random acts of street violence to Head of State protection. LTA[®] is Armormax South Africa's ballistic glass of choice. IAC designed LTA[®] is:

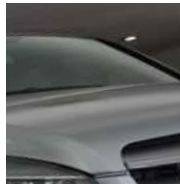

- Distortion-free
- Designed to look like conventional automotive glass.
- Lighter and thinner than all-glass laminates or air-gap designs.
- Unaffected by temperature fluctuations.
- Offers dependable protection against a variety of lethal weapons

Opaque Armor

Armormax[®] is the ultimate in opaque ballistic armor developed and owned by International Armoring Corporation. The lightest opaque armor in the industry, Armormax[®] reduces the added opaque weight on a vehicle by 60%.

A combination of a variety of synthetic fibers, Armormax[®] composite technology is ten times stronger than ballistic steel - pound for pound!
